"Cloning and expression of cDNA encoding Xenopus laevis bone
morphogenetic protein-1 during early embryonic development.";

Gene 134:257-261(1993).

-!- FUNCTION: INVOLVED IN PATTERN FORMATION IN GASTRULA AND LATER
DIFFERENTIATION OF DEVELOPING ORGANS.

-!- DEVELOPMENTAL STAGE: BLASTULA, EARLY GASTRULA AND HATCHED
TADPOLES; LITTLE OR NO EXPERSSION IN MORULA AND LATE GASTRULA.

-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

                    COFACTOR: Binds 1 zinc ion per subunit (By similarity).
ENZYME REGULATION: ACTIVITY IS INCREASED BY THE PROCOLLAGEN C-ENDOPEPPITASE ENHANCER PROTEIN.
TISSUE SPECIFICITY: AT HIGH LEVELS IN EMBRYONIC MATERNAL DECIDUUM
AND FLOOR PLATE REGION OF THE NEURAL TUBE. LESS IN DEVELOPING

Cell 90:753-762(1997).

Cell 90:753-762(1997).

CARDIOVASCULAR SYSTEM, IN ANGIOGRNESIS, IN THE PORMATION OF CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS SYSTEM. IT MEDIATE THE CHEMOREPULSANT ACTIVITY OF SEMAPHORINS. IT STORE THE OFFICE ISOPREM OF VEGF AND VEGF-B. COEXPRESSION WITH KOR RESULTS. IN THE VEGF-165 BINDS TO SEMAPHORINS. OF THE VEGF-165 BINDS TO VEGF-B. COEXPRESSION WITH KOR RESULTS. IN TROPERASED CHEMOTAXIS.

C.I. SUBCELLULAR LOCATION: Type I membrane protein.

C.I. SUBCELLULAR COATION: Type I membrane protein.

C.I. SIMILARITY: Contains 2 CUB domains.

C.I. SIMILARITY: Contains 2 FS/B type C domains.

C.I. SIMILARITY: Contains 1 MAM domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright. -!- FUNCTION: Growth factor active in anglogenesis, lymphanglogenesis and endothelial cell growth, stimulating their proliferation and migration and also has effects on the permeability of blood vessels. May function in the formation of the venous and lymphatic vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. Binds and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     68
            -:- SUBUNIT: Homodimer; non-covalent and antiparallel (By similarity).
-:- SUBCELLULAR LOCATION: Secreted (By similarity)
-:- FWH: Undergoes a complex proteolyric maturation which generates a variety of processed secreted forms with increased activity toward vegrey of processed secreted forms with increased activity toward vegrey of secreted forms of the increased activity toward vegrey of substitute bods before secretion. The fully processed vegre- is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions (By similarity).
-:- SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        69 LWRCRLKLKSLANVDSRSTSHRSTRFAATFYDTETLKVIDEEWORTOCSPRETCVEVASE

"Neuropilin-2, a novel member of the neuropilin family, is a high
affinity receptor for the semaphorins Sema B and Sema IV but not Sema
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Neuron 19:547-559(1997).
-!- FUNCTION: HIGH AFFINITY RECEPTOR FOR SEMAPHORING 3C, 3F, VEGF-165
-!- FUNCTION: HIGH AFFINITY RECEPTOR FOR SEMAPHORING OF PGF.
-!- SUBUNIT: NEUROPILIN-2 PROBABLY FORMS AN HETEROMERIC COMPLEX WITH
NEUROPILIN-1 IN ORDER TO BE A FUNCTIONAL SEMAPHORIN E RECEPTOR.
-!- SUBCELLINIAR LOCATION: Type I membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                23 ITVSTNGSIHSPRFPHTYPRNTVLVWRLVAVEENVWIQLTFDERFGLEDPEDDICKYDFV

-1- TISSUE SPECIFICITY: During gastrulation, accumulates around the closing blastopore with greater expression ventrally. At the animal pole, expressed in the ectoderm flanking the anterior neural plate. At the 10-somite stage, expressed in the developing tailbud and cranial neural crest. At the 20-somite stage, also expressed in the hematopoietic system.
-1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12A.
-1- SIMILARITY: Contains 5 CUB domains.

In the developing embryo it is found in the nervous system. In adult tissues, it is predominantly in the nervous system. In adult tissues, it is highly expressed in heart and placenta; moderately in lung, liver, skeletal muscle, kidney and pancreas; and low in adult brain.

Isolorm 2 is found in liver hepatocytes, kidney distal and proximal tubules.

Isolorm 2 is found in liver hepatocytes, kidney distal and proximal tubules.

Isolorm 2 to THE NEUROPLIN FAMILY.

                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. -!- FUNCTION: BINDS TO THE COCH-TERMINAL PROPEPTIDE OF TYPE I PROCOLLAGEN AND ENHANCES PROCOLLAGEN C-PROTEINASE ACTIVITY.
-!- FUNCTION: C-TERMINAL PROCESSED PART OF PCPE (CT-PCPE) MAY HAVE AN METALLOPROTEINASE INHIBITORY ACTIVITY.
-!- SUBCELLULAR LOCATION: Secreted.
-!- PTM: C-TERMINALLY PROCESSED AT MULTIPLE POSITIONS.
-!- SIMILARITY: Contains 2 CUB domains.
-!- SIMILARITY: Contains 1 NTR domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CLEAVAGE.

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
